

Type UHMPE tape

UHMPE (Ultra High Molecular PE) has a smooth surface with adhesive glue at one side. This type has a temperature resistance up to +52°C and is therefore more suitable for cooler environmental factors.

Other than PTFE, this type of tape has a low friction coefficient and a very high wear resistance. Ideal for food processing and packaging processes where smoothness and low wear are required.

Type UHMPE is standard available in rolls of 15 mtr. Available in thickness 0,13 mm or 0,25 mm and a width of 610 mm. The standard colour of UHMPE tape is transparent/natural, but also available on other colours on request.

Possibilities

CEH13; thickness 0,13 mm
CEH25; thickness 0,25 mm

Polyfluor
